

Glaciers

Read the text about glaciers and choose the best word for each space.

A Glacier is made of thick ice that is normally found between mountains. It can be as small (1) _____ a football field or as big as 100 km in length.

Glaciers (2) _____ made of snow that falls in one place for a long time. As the snow gets heavier, it presses (3) _____ to become thick ice.

Glaciers are found everywhere, but most are (4) _____ the Antarctic and Greenland. They cover 10% of the world's land, and they store 75% of the world's freshwater. Many (5) _____ the glaciers are melting due to temperature increase in the world. As they melt, the water flows into (6) _____ rivers, which makes our oceans rise. This causes flooding to land that is close to the sea.

1. A as B in C on
